Circle Geometry GEOMETRY TEACHER'S GUIDE - Edgenuity

Basic information about circles A circle is all points in the same plane that lie at an equal distance from a center point. The circle is only composed of the points on the border. You could think of a circle as a hula hoop.

By definition, all radii of a circle are congruent, since all the points on a circle are the same distance from the center, and the radii of a circle have one endpoint on the circle and one at the center. All circles have a diameter, too. The diameter of a circle is the segment that contains the center and whose endpoints are both on the circle.
