The principal stresses at the point are determined, as indicated in the question, by transforming each state of stress into a  $\sigma_x$ ,  $\sigma_y$ ,  $\tau_{xy}$  stress system. Clearly, in the first case  $\sigma_x=0$ ,  $\sigma_y=10\text{N/mm}^2$ ,  $\tau_{xy}=0$  (Fig. S.1.4(a)).

*Aircraft Structures for Engineering Students, Sixth ...*

Aircraft Structures for Engineering Students The leading Aircraft Structures text, covering a complete course from basic structural mechanics to finite element analysis. Enhanced pedagogy with additional case studies, worked examples and home work exercises.

*Aircraft Structures for Engineering Students, Fourth Edition*

Aircraft Structures for Engineering Students, Sixth Edition. The major modification in the sixth edition is the extension of the work on composite materials and structures presented in Chapter 25. In the fifth edition, the theory was restricted to single-ply laminates; this has now been extended to a consideration of multi-ply laminates.
