Department of Mathematics at UCSB

Elementary Differential Geometry presents the main results in the differential geometry of curves and surfaces suitable for a first course on the subject. Prerequisites are kept to an absolute minimum - nothing beyond first courses in linear algebra and multivariable calculus - and the most direct and straightforward approach is used throughout.

Such a student would be better served either by O'Neill's "Elementary Differential Geometry" or Oprea's "Differential Geometry and its Applications" (see in particular the last chapter). This is the difference between classical and modern treatments of differential geometry.
