This study discusses performance and exhaust emissions from spark-ignition engine fueled with ethanol-methanol-gasoline blends. The test results obtained with the use of low content rates of ethanol-methanol blends (3-10 vol.%) in gasoline were compared to ethanol-gasoline blends, methanol-gasoline blends and pure gasoline test results.

Detailed Test Information - Fuel Economy

Fuel economy is measured under controlled conditions in a laboratory using a standardized test procedure specified by federal law. Manufacturers test their own vehicles—usually pre-production prototypes—and report the results to EPA. EPA reviews the results and confirms about 10-15 percent of them through their own tests at the National Vehicles and Fuel Emissions Laboratory.
