[PDF] Functional evaluation: The Barthel Index: A simple ...

The Barthel Index is designed to measure the ability of an individual with a neuromuscular or musculoskeletal disorder to care for oneself. It consists of 10 questions that relate to degree of independence with activities of daily living (ADLs). The Barthel Index is calculated by summing the response value to each of the 10 questions.

Barthel Index for Activities of Daily Living (ADL) Calculator

The Barthel index, PULSES profile, and ESCROW profile were used to measure functional status, social support, and rehabilitation progress. Statistical analysis consisted of t-tests to determine significant differences between the means of scores at varying intervals, and analysis of variance was added to determine interactions between amputation level, age, and sex as related to functional change.
