It is due to the density (real analysis) that the responses can take. It seems like a silly example, yes, but it is not explained by statistics. It is explained by real analysis and more generally, mathematics. The real headache would be not understanding the problem in a 'rigorous' manner.

In modern real analysis, set-theoretic questions are somewhat more to the fore than they are in most work in algebra, complex analysis, geometry, and applied mathematics. A relatively recent line of development in real analysis, "nonstandard analysis," allows, for example, positive numbers that are infinitely small but not zero.
