Parasites have evolved numerous complex and fascinating ways of interacting with their hosts. The subject attracts the interest of numerous biologists from the perspective of ecology and behavioral biology, as well as from those concerned with more applied aspects of parasitology.

~~The behavioural ecology of parasites. - CAB Direct~~

Behavior-altering parasites are parasites with two or more hosts, capable of causing changes in the behavior of one of their hosts to enhance their transmission, sometimes directly affecting the hosts' decision-making and behavior control mechanisms. They do this by making the intermediate host, where they may reproduce asexually, more likely to be eaten by a predator at a higher trophic level ...

Clearly, the study of the evolution and behavioral ecology of host-parasite interactions stands as an interdisciplinary challenge. Acknowledgements The 'Parasites and Behavior' workshop, held at the University of California at Davis, USA, 23-26 March 1996, was sponsored by NSF Animal Behavior Training grant DIR-9113287, and was organized by Ben Hart, Kathryn Hanley and Jeni Trevitt.

This book addresses the behavioural adaptations of parasites across a broad range of taxa, including parasitoid wasps, entomopathogenic

nematodes, seed-feeding insects and plant-parasitic nematodes. The chapters emphasize the fundamental principles of parasitism and address the diversity and sophistication of parasite behavioural adaptations.

~~The Behavioural Ecology of Parasites by Elmer E. Lewis~~

Evolved dependence and conditionally helpful parasites reveal that hosts might match their behaviour to the environment more accurately and experience higher fitness in the presence than in the absence of parasites. This has important implications for studies on host behaviour and conservation biology. Laboratory Studies on Host Behaviour

Behavioral ecology, also spelled behavioural ecology, is the study of the evolutionary basis for animal behavior due to ecological pressures. Behavioral ecology emerged from ethology after Niko Tinbergen outlined four questions to address when studying animal behaviors that are the proximate causes, ontogeny, survival value, and phylogeny of behavior.. If an organism has a trait that provides ...
