Pryor's pioneering work has helped bring positive reinforcement methods to the worlds of companion animals and zoos--and to us too! Her best-selling book Don't Shoot the Dog is as much about people as about animals, and I cite it a number of times in The Science of Consequences. I really enjoyed her most recent book too, Reaching the Animal Mind.

Actions have consequences--and the ability to learn from them revolutionized life on earth. While it's easy enough to see that consequences are important (where would we be without positive reinforcement?), few have heard there's a science of consequences, with principles that affect us every day. Despite their variety, consequences appear to follow a common set of scientific principles and ...

Susan Schneider's book "The Science of Consequences" is a very welcome treatment of a little known science (behavior analysis) and its many implications for both human and non-human animal behavior. This book is a gem, full of great examples of the pervasiveness of consequences as causal determinants of behavior, even when their subtlety obscures them from view.

These can be constructed into a 2 x 2 matrix that includes the type of stimulus (desirable/pleasant or aversive/unpleasant) as one factor and the intended behavioral change (increase or decrease response frequency) as the second ...
